## BRIDGE THE GAP AND RAMP UP

The gap between IC manufacturing and the conventional PCBA industry is bridged by applying revolutionary additive technology. This process research & development starts with the micro assembly in advanced packaging and is integrated with standard PCBA and new structural electronics technologies. Through inkjet-printing both passive and active components can be deposited and distributed within flexible and variable interconnection layers (even in small series or 1-piece flow). Our technology expertise is in process design, characterization, capability analysis and yield engineering. DoMicro invents and develops solutions for specific equipment, new materials, multiple interaction and parameter tuning. We create optimized recipes including hard- and software to achieve optimum results for customized solutions. This implicates a tailored & tuned manufacturing setup for small series in line with customer defined quality and technology standards.

## DOMICRO COMPANY PROFILE

DoMicro BV is a technology company creating value by additive technologies in electronic manufacturing. A revolutionary fully integrated and automated production system solution provides the competitive edge with respect to time to market, total costs, ramp up volumes and your secured IP position.

If you are challenged by the market and looking for a partner to move your ideas into realization, contact us. We really do facilitate your imagination.

# FACILITATE YOUR IMAGINATION

## FLEXIBLE HYBRID ELECTRONICS

### SOLUTIONS & VALUE PROPOSITION

**1**

#### REDUCING TIME TO MARKET

- PRODUCT DEVELOPMENT AND FAST ITERATIONS

**2**

#### LOWER TOTAL COST

- INTEGRATE FUNCTIONS
- SHORTENING THE VALUE CHAIN
- REDUCING CO<sub>2</sub> FOOTPRINT BY ELIMINATION OF GLOBAL LOGISTICS

**3**

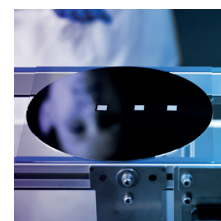

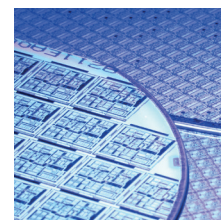

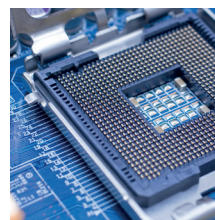

#### ENABLING RAMP UP TO VOLUME MANUFACTURING

- PILOT & FLEXIBLE SMALL SERIES PRODUCTION
- NICHE MARKETS & SPECIAL APPLICATIONS

**4**

#### INDEPENDENT INNOVATION

- PROPRIETARY RECIPES & TECHNOLOGY
- IP SECURED PROCESSING
